

TAU™ BASE SERIES

ULTIMATE MOISTURE MANAGEMENT FABRIC

Different parts of the body require different airflow to effectively manage moisture. Our Base Series fabrics offer the latest zoned-knits that increase airflow to provide the next generation in moisture management technology. Bi-component knitting creates two unique surfaces: a skin-soft side for pick-up and a durable outer face for Evaporative Cooling.

BASE

Premier base layer fabric with unsurpassed moisture management and breathability for a wide range of uses

BASE FLEX

Added stretch ranging from moderate for casual wear to supportive for performance gear

BASE COMFORT STRETCH

Maximum stretch and comfort—soft skin-side wicks moisture keeping skin dry and warm, tough outer face for wind and abrasion resistance

Use:

Best for direct-to-skin contact. Use in garments for indoor and outdoor activities or anywhere perspiration can cause discomfort or impact performance.

SERIES BENEFITS:

- **Evaporative Cooling** – speeds drying time to keep you cool and dry
- **Multi-level Construction** – bi-component structure combines comfort and warmth
- **Unique Knit Patterns** – adapt to various body temperature zones
- **Breathability** – perspiration vapor escapes easily
- **Comfort** – a brushed inner surface makes Dry Series fabrics a pleasure to wear
- **Easy Care** – machine washable and dryer safe
